

Nature Works

To whom it may concern

Mr Daniel Pellicer, as the Plant Maintenance Manager at the Arena Sports Club facilities at Vicente Hipólito Avenue in San Juan, Alicante, signs the following document to attest that the technological glass for industrial purposes which, as I have been informed, has the MC2 Calibration Technology (Grupo Camacho) is giving very satisfactory results.

The filter medium that has been substituted is:

- | | | |
|---------------------------------------|---|---|
| <input type="checkbox"/> Silica sand | <input type="checkbox"/> Zeolite | <input type="checkbox"/> Diatomaceous earth |
| <input type="checkbox"/> Common glass | <input checked="" type="checkbox"/> AFM Glass | <input type="checkbox"/> Other |

I may confirm that using the old filter medium we were obliged to do a daily backwash due to water turbidity. Simply changing it for Nature Works HI-Tech Filter Media glass, the water takes 7 days to reach the same level of turbidity.

A higher performance implies:
Higher energy efficiency
Higher water saving.
Higher chemical product saving.

I can also confirm that the unique kind of glass particles of the new filter medium is completely harmless .
